smbu06 element (this study)
38,865 bp; 51 CDS (provider annotation)
E. lactis AF116-27 (GCF_988228025.1)
terminase 98.6% aa id
38/51 element proteins matched, 51-100% id
E. lactis BT0171 (GCF_049315165.1)
terminase 97.3% aa id
38/51 element proteins matched, 51-99% id
E. durans BT0139 (GCF_049315155.1)
terminase 93.4% aa id; rev-comp normalised
33/51 element proteins matched, 36-100% id
E. lactis IS_B39 (GCF_052655665.1)
terminase 83.7% aa id; rev-comp normalised
38/51 element proteins matched, 39-100% id
E. faecium HB-1 (GCF_006337145.1)
terminase 95.0% aa id; rev-comp normalised
39/51 element proteins matched, 51-100% id
E. faecium 708B_2 (NZ_JARHVH010000002.1)
draft contig; source of WP_289892796.1
34/51 element proteins matched, 50-100% id
B. subtilis 168 PBSX (NC_000964.3:1,320,570-1,345,795)
characterised defective prophage (Wood et al. 1990)
no qualifying link; terL 24% id over 97% length
B. subtilis 168 skin element (NC_000964.3:2,650,900-2,701,000)
module-architecture comparator; rev-comp normalised
3/51 element proteins matched (yqaJ/yqaK/yqaS, 45-48% id)
gene colour = functional module (assigned per row; for PBSX/skin from GenBank annotation keywords)
lysogeny / regulation
DNA packaging
head
tail / baseplate
lysis
no assignment
Links: real TBLASTN hits (pident ≥ 30%, query coverage ≥ 50%, gene overlap ≥ 50%); grey arrows: no detectable homology to the element.
Colours denote functional module only; they do not imply sequence homology between rows.
