

Whole-chromosome alignment (BLASTN)

Synteny: one prophage excision + one SNP

Junction repeat (146 bp): attL vs attJ (= attR) — 59/146 differences

d

smb06 chromosome : 2,676,906 bp
smb08 chromosome : 2,638,187 bp
Difference : -38,719 bp (one excisable element)
+ 1 SNP (smb08 2,404,143 C→T;
smb06 2,442,862) + junction-repeat
variation confined to attL vs attJ

Colinear backbone: 2,638,186/2,638,187 bp covered
(100.00% of smb08) in two BLASTN HSPs;
identity 100.000% (back segment) / 99.998% (front)

smb06 is byte-identical to E. lactis 194
(GCF_056582645.1) chromosome (0 rotation needed);
ANiB vs 194 = 100.00%; vs L. lactis 14B4 = 83.81%
