

smbu06/smbu08 shared plasmid
128,837 bp (100% identical)

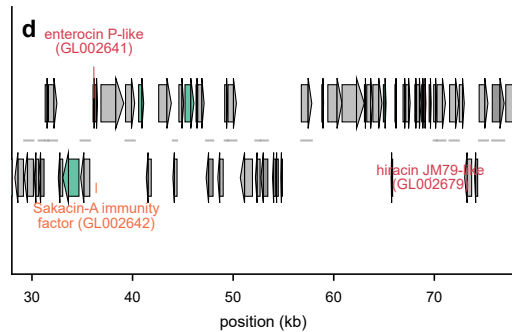

Raw coordinates: circular-origin break

Rotation-corrected: 128,837/128,837 bp, 0 SNPs, 0 indels

Bacteriocin module neighbourhood (30–76 kb)

Two independent lines of evidence: (i) canonical (rotation- and strand-normalised) SHA-256 of the two plasmid sequences are identical (ce3adc8f...); (ii) BLASTN full-length alignment covers 128,837/128,837 bp at 100.0% identity with 0 mismatches (128,837 bp union of two HSPs split at the circular origin; forward rotation 111,659 bp). The plasmid is IS-rich but lacks any conjugation module (no relaxase/Mob/TraG/MPF); the bacteriocin module region (31.1–74.7 kb, red arc) shows no IS enrichment over the plasmid average (0.32 vs 0.31 MGE per kb).
